

# CS 536 Project #6

## Contributors

Yuting Yan, Yusen Liu

## Program Details

We wrote a code generator for C-- programs represented as abstract-syntax trees.

## Run

First, go to the working directory.

```
$ cd $WORKING_DIR
```

Then, execute make to compile the program

```
$ make
```

Finally, execute the following command to test the input file “test.cminusminus”.

```
$ make test
```

The program reads both files and writes the unparsed result to “test.s”.
